1. Suitability of products
2. Order in which products are applied

Back to Shop Button for other products

Undo button for player to try out different sequences of applying the product
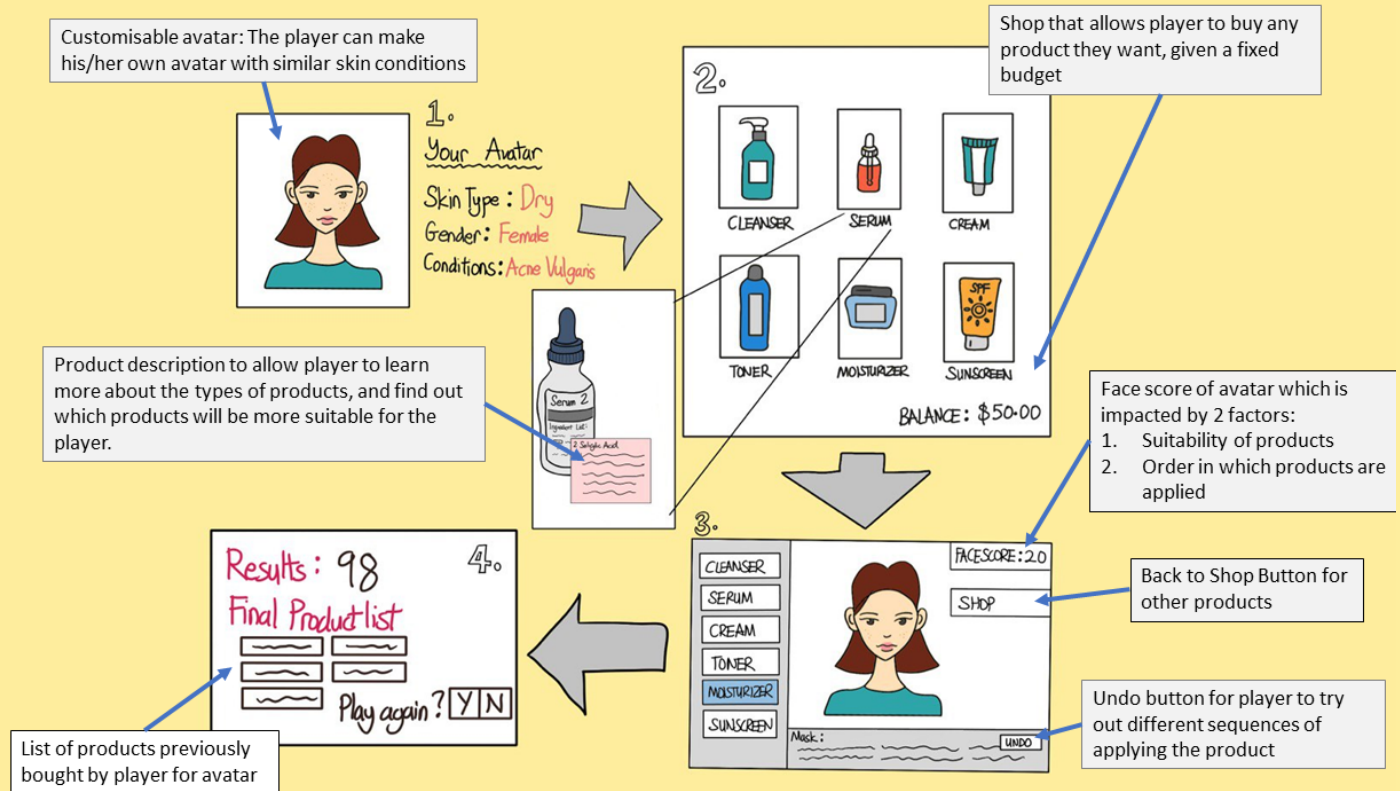

List of products previously bought by player for avatar

Objective: The game's objective is to let the Player learn, through trial and error, the different facial care products suitable for his/her skin type and in what order should the products be applied. The Player will aim to increase his/her avatar's face score, which will be impacted by the suitability of the products and the order in which they are applied.

How to Play:
- The Player first creates his/her own avatar with personalisable skin conditions and gender.
- The Player will be given a fixed budget to spend on facial care products in the virtual store. There will be different products for different skin types and genders.
- Then, the Player will use all the products in any order he/she desires. The score of the Player will be updated as the products are used. When a product is chosen, the corresponding product type box in the game's left-hand corner turns blue. The Player is allowed to undo his/her most previous action.
- The game ends when all the previously purchased products have been used up
- The Player will be shown his/her highest score attained and the corresponding products and order he/she used to achieve that score.
